## Technical Skills

- HTML5
- CSS
- Bootstrap (CSS)
- Bulma (CSS)
- Materialize (CSS)
- JavaScript
- JQuery (Javascript)
- React (Javascript)
- Node.js
- Express (Node.js)
- Express-Handlebars
- MySQL
- Sequelize (MySQL)
- JawsDB (MySQL)
- MongoDB
- Mongoose (Mongo)
- Visual Studio Code
- Git
- GitHub
- MySQL Workbench
- Robo 3T
- Postman
- Heroku
- Agile Methodology

## Projects

### Book Finder

HTML5, CSS, Bulma (CSS Framework), Javascript, JQuery

A web application that utilizes the Google Books API to recommend books to users based on user side input criteria. Working as a member of a four person team, I was responsible for coding front-end Javascript, including dynamic text and image population and click events, as well as polishing up CSS using the Bulma CSS framework

---

### Whiskey Journal

HTML5, CSS, Bulma, Javascript, JQuery, Express, Express-Handlebars, MySQL, Sequelize, JawsDB, Heroku

A CRUD application that allows users to keep track of whiskeys they've tasted, assigning names, whiskey categories, tasting notes, and ratings via an express-handlebars based user interface that passes information into the back-end to be stored in a MySQL database with a PUT request. Users can then view their stored whiskey data with a GET request that dynamically populates in a responsive, mobile friendly format. As part of a three person team, I was responsible for designing a responsive front end, utilizing Express-Handlebars as a templating engine to pass user input between the front and back-end.

---

### Burger-App

HTML5, CSS, Bootstrap, Bootswatch, Javascript, JQuery, Express, Express-Handlebars, MVC Framework

A simple CRUD application that allows a user to create a burger that will dynamically populate in the viewport. The user can then move their burger into the "Devoured" column by clicking a button that, using a SQL query combined with a PUT method, will update a boolean within the burger's schema.

## Education

### University of Denver Full-Stack Coding Bootcamp - *Certificate of Completion*

DU Coding Bootcamp provides an intensive curriculum designed to prepare talented software developers for roles in the tech industry upon immediate completion of the course.
